

Secure Blockchain  
for Business

# How to exploit the full potential of **business ecosystems** with **distributed ledger**?

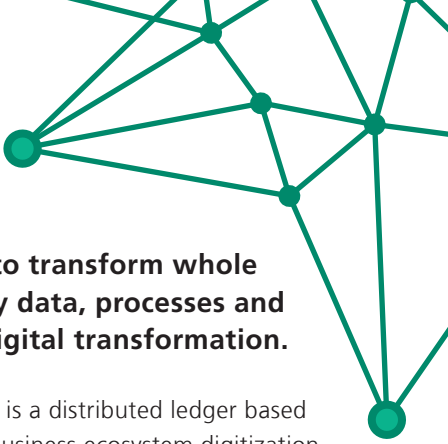

A solution by

ADNOVUM

Used by

 cardossier

**Digitalization is taking its next big leap to transform whole business ecosystems. Having trustworthy data, processes and identities are the cornerstones for this digital transformation.**

AdNovum's «Secure Blockchain for Business» (SB4B) is a distributed ledger based platform for business ecosystems. As a catalyst for business ecosystem digitization, SB4B increases efficiency and effectiveness by synchronizing data between different silos and automating cross-organizational business processes. Clear data ownership, selective data sharing and privacy-preserving data structures increase trust and compliance. Individualization of products and services and a data market lead to innovation.

cardossier is a digital dossier based on SB4B, in which all relevant information about the entire life cycle of a vehicle can be safely and securely stored.
